SUMMARY

Full stack developer with 4 years of commercial experience in Python and TypeScript, for the past year mostly building LLM-based products and AI agents in LangChain. Experienced in AI-assisted development with Claude Code and MCP, with a strong focus on code review and automated testing.

EXPERIENCE

Full Stack Developer (AI) – Causality 01/2026 – now

Main author of the AI assistant in STRUCTURA, a multi-tenant SaaS where companies define their own data schemas and an LLM fills them with data from documents, Gmail, OwnCloud and Google Calendar.

- Built the chat from scratch in Next.js and LangChain, with streaming, threaded history and links to database records.
- Extended the assistant so that anything available in the UI can also be done through chat, from editing records and schemas to running document extraction.
- The agent never saves data on its own. Every change is shown to the user as a proposal and runs in a transaction only after approval. Its tools are generated from each customer's schemas.
- Built a Chrome extension (Manifest V3) that reads web pages and fills in forms with data from the system, also in React apps. Added Auth0 login with PKCE and around 195 tests in Vitest.
- Moved the agent from SSE to Socket.IO, so it can call tools in the user's browser in the middle of a response and stop generating on the server when the user cancels.

Full Stack Developer – Lokey Sp. z o.o. (IRMATIC) 04/2025 – now

- Leading the integration of IRMATIC medicine cabinets and smart lockers with the AMMS hospital system, working directly with Asseco and hospital staff.
- Developing the IRMATIC CMS and apps running on the devices, with Vue.js, Quasar and TypeScript on the front end and Flask, SQLAlchemy and PostgreSQL on the back end.
- Writing tests in Pytest and deploying with Docker on AWS, where the infrastructure is managed in Terraform.

Full Stack Developer – Correct Context Sp. z o.o. (Comscore, Inc.) 04/2024 – 12/2025

- Built REST APIs and microservices in Django, Django REST Framework and FastAPI, with React on the front end.
- Wrote Airflow DAGs for data processing and prepared documentation for moving from on-premise to AWS.
- Maintained CI/CD pipelines in Jenkins and test suites in Pytest.

Software Engineer Intern & QA Automation Intern – Dolby Laboratories 12/2022 – 04/2024

- Maintained the Dolby Access desktop app in C# and .NET with xUnit tests. Earlier, as a QA intern, built Python test automation in Pytest.

PROJECTS

VELMOIS online store – co-founder and sole developer, MOISS Sp. z o.o. 07/2025 – now

Online store for our jewelry brand, which I build and host on my own server. It started as FastAPI and Next.js and was later rewritten into a single Next.js app.

- Next.js 16, TypeScript, Tailwind CSS, Prisma and PostgreSQL, with database triggers guarding the stock ledger.
- Guest checkout with stock reservation during payment, Przelewy24 payments including BLIK, InPost parcel lockers and order emails sent through AWS SES.
- Admin panel for products, stock, orders, returns and homepage content.
- Around 350 unit and integration tests in Vitest and 71 Playwright E2E tests run in GitHub Actions before every merge. Deployed with Docker behind nginx.
- AI-assisted workflow in Claude Code, with separate agents for code review and browser testing.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C#, HTML, CSS | Polish (native), English

Backend: FastAPI, Django, Django REST Framework, Flask, NestJS, Socket.IO, SQLAlchemy, Prisma, REST, GraphQL

Frontend: React, Next.js, Vue.js, Quasar, Tailwind CSS, shadcn/ui, Chrome extensions

AI: LangChain, OpenAI API, AI agents, tool calling, MCP, Claude Code

Databases and testing: PostgreSQL, Pytest, Vitest, Playwright, xUnit, Selenium

Cloud and DevOps: AWS, GCP, Docker, GitHub Actions, GitLab CI, Jenkins, Linux, nginx, Airflow, Terraform

EDUCATION

M.Sc. Computer Science (part-time) – WSB Merito University, Wrocław 03/2025 – 02/2027 (exp.)

B.Eng. IT Automation Systems – Wrocław University of Science and Technology, grade 5.0 10/2021 – 01/2025
